Pelco's copper/aluminum theft deterrent products are made to install quickly and easily in **existing** or **new** Roadway Lighting and Traffic Poles. Pelco Copper Safe Products are Versatile Enough to Fit a *Variety* of Applications:

opper/aluminum theft is a growing problem throughout the world. Many municipalities and utility companies are reporting huge losses of copper/aluminum, causing a drain on profits, city coffers and creating a danger to citizens.

Pelco Products has created a variety of products that are made to help deter copper/aluminum theft, either in new poles or with products that can be added to existing Roadway Lighting and Traffic Poles.

You may not realize the impact of copper/ aluminum theft until it's too late- make your community safer with Pelco's Copper Safe products.

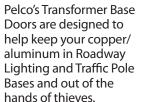

Cable Retainer

Pelco's cable retainer is ideal for new Roadway Lighting and Traffic Pole installations. Cables are locked in place. The metal guard around the cable makes cutting and accessing cable very difficult without the proper tools.

Hand Hole Cover

Pelco's affordable, easyto-install locking hand hole covers use a special tool to lock in place. These hand hole covers come in a variety of shapes and sizes.

Multiple Sizes, Colors & Shapes Available

Copper Safe

## Tube Assembly for Cable Retainer

SP-6358

When using our standard cable retainer in conjunction with a break away transformer base, a thief could remove the transformer base door and cut the cables below the cable retainer, thus leaving the cable between the poles unprotected. The cylinder will be mounted between the top of transformer base and the ground surface where the thief would be unable to cut the cables.
